

Our New Highest Level of Protection.

Introducing the GUARDIAN® High Capacity Air Filter.

Air Sentry® introduces the GUARDIAN High Capacity Air Filter for the most extreme conditions. It's an extra protective barrier between your GUARDIAN unit and excessively dusty environments like mining operations, pulp and paper facilities, gypsum plants, coal-fired power plants and more.

Even in the most extreme conditions, the GUARDIAN High Capacity Air Filter helps extend desiccant life. And it fits on Air Sentry GUARDIAN, X- and XR-Series breathers.

Let us show you how we can save you time and money.

The GUARDIAN High Capacity Air Filter

- Extends breather life
- Lowers maintenance costs
- Ideal for very dusty environments

Stackable

Stack cartridges to extend the life of breathers even further using the Modular Stack Ring™. This proprietary feature lengthens the service life, reducing cost and maintenance intervals.

The gold standard in contamination control
